This manual is the latest at the time of printing, and does not include the modification which may be made after the printing, by the constant improvement of product.

Safety Precaution

	<div>CAUTION</div> <div>RISK OF ELECTRIC SHOCK DO NOT OPEN</div>	
CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL ONLY.		

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

PRECAUTIONS DURING SERVICING

1. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.
Examples: RF converters, tuner units, antenna selection switches, RF cables, noise-blocking capacitors, noise-blocking filters, etc.
2. Use specified internal Wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
3. Use specified insulating materials for hazardous live parts. Note especially:
 - 1) Insulating Tape
 - 2) PVC tubing
 - 3) Spacers (insulating barriers)
 - 4) Insulating sheets for transistors
 - 5) Plastic screws for fixing micro switches
4. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap ends of wires securely about the terminals before soldering.

5. Make sure that wires do not contact heat generating parts (heat sinks, oxide metal film resistors, fusible resistors, etc.)
6. Check if replaced wires do not contact sharply edged or pointed parts.
7. Make sure that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

MAKE YOUR CONTRIBUTION TO PROTECT THE ENVIRONMENT

Used batteries with the ISO symbol

for recycling as well as small accumulators (rechargeable batteries), mini-batteries (cells) and starter batteries should not be thrown into the garbage can.

Please leave them at an appropriate depot.

WARNING:

Before servicing this TV receiver, read the **SAFETY INSTRUCTION** and **PRODUCT SAFETY NOTICE**.

SAFETY INSTRUCTION

The service should not be attempted by anyone unfamiliar with the necessary instructions on this apparatus. The following are the necessary instructions to be observed before servicing.

1. An isolation transformer should be connected in the power line between the receiver and the AC line when a service is performed on the primary of the converter transformer of the set.
2. Comply with all caution and safety related provided on the back of the cabinet, inside the cabinet, on the chassis or picture tube.
3. To avoid a shock hazard, always discharge the picture tube's anode to the chassis ground before removing the anode cap.
4. Completely discharge the high potential voltage of the picture tube before handling. The picture tube is a vacuum and if broken, the glass will explode.

5. When replacing a MAIN PCB in the cabinet, always be certain that all protective are installed properly such as control knobs, adjustment covers or shields, barriers, isolation resistor networks etc.
6. When servicing is required, observe the original lead dressing. Extra precaution should be given to assure correct lead dressing in the high voltage area.
7. Keep wires away from high voltage or high temperature components.
8. Before returning the set to the customer, always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as antennas, terminals, screwheads, metal overlay, control shafts, etc., to be sure the set is safe to operate without danger of electrical shock. Plug the AC line cord directly to the AC outlet (do not use a line isolation transformer during this check). Use an AC voltmeter having 5K ohms volt sensitivity or more in the following manner.
Connect a 1.5K ohm 10 watt resistor paralleled by a 0.15 μ F AC type capacitor, between a good earth ground (water pipe, conductor etc.,) and the exposed metallic parts, one at a time. Measure the AC voltage across the combination of the 1.5K ohm resistor and 0.15 μ F capacitor. Reverse the AC plug at the AC outlet and repeat the AC voltage measurements for each exposed metallic part.

The measured voltage must not exceed 0.3V RMS.

This corresponds to 0.5mA AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

The resistance measurement should be done between accessible exposed metal parts and power cord plug prongs with the power switch "ON". The resistance should be more than 6M ohms.

AC Leakage Current Check

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this apparatus have special safety-related characteristics.

These characteristics are offered passed unnoticed by visual inspection and the protection afforded by them cannot necessarily be obtained by using replacement components rated for a higher voltage, wattage, etc.

The replacement parts which have these special safety characteristics are identified by \triangle marks on the schematic diagram and on the parts list.

Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire, or other hazards.

9. Must be sure that the ground wire of the AC inlet is connected with the ground of the apparatus properly.

NOTE :	Only documents stamped "Controlled Document" to be used for manufacture of production parts.
---------------	--

1. Standard Test Conditions

All tests shall be performed under the following conditions, unless otherwise specified.

- 1.1 Ambient light : 150ux (When measuring I_B , the ambient luminance $\leq 0.1\text{Cd/m}^2$)
- 1.2 Viewing distance : 50cm in front of PDP
- 1.3 Warm up time : 30 minutes
- 1.4 PDP Panel facing : no restricted
- 1.5 Measuring Equipment : PC, Chroma 2225 signal generator (with Chroma digital additional card) or equivalent, Minolta CA100 photometer
- 1.6 Magnetic field : no restricted
- 1.7 Control settings : Brightness, Contrast, Tint, Color set at Center(50)
- 1.8 Power input : 100~120Vac 60Hz
- 1.9 Ambient temperature : $20^{\circ}\text{C} \pm 5^{\circ}\text{C}$ ($68^{\circ}\text{F} \pm 9^{\circ}\text{F}$)
- 1.10 Display mode : Resolution 1024 x 768
- 1.11 Other conditions :
 - 1.11.1 With image sticking protection of PDP module, the luminance will descend by time on a same still screen and rapidly go down in 5 minutes. When measuring the color tracking and luminance of a same still screen, be sure to accomplish the measurement in one minute to ensure its accuracy.
 - 1.11.2 Due to the structure of PDP, the extra-high-bright same screen should not hold over 5 minutes for fear of branding on the panel.

ELECTRICAL CHARACTERISTICS

2. Power Input

2.1	<u>Voltage</u>	:	100 ~120VAC	60Hz
2.2	<u>Input Current</u>	:	5.0 /2.5A	
2.3	<u>Maximum Inrush Current</u>	:	<30 A (FOR AC110V ONLY)	
	Test condition	:	Measured when switched off for at least 20 mins	
2.4	<u>Frequency</u>	:	50Hz to 60Hz(±3Hz)	
2.5	<u>Power Consumption</u>	:	330W Typical	
	Test condition	:	full white display with maximum brightness and contrast	
2.6	<u>Power Factor</u>	:	Meets IEC1000-3-2	
2.7	<u>Withstanding voltage</u>	:	1.5kVac or 2.2kVdc for 1 sec	

3. Display

3.1	Screen Size	:	42" Plasma display
3.2	Aspect Ratio	:	16:9
3.3	Pixel Resolution	:	1024x768
3.4	Peak Brightness	:	1000 cd/m ² (Typical, Panel only)
3.5	Contrast Ratio (Dark room)	:	5000:1 (Ratio, Typical, in a dark room, Panel only)
3.6	Viewing Angle	:	Over 160°
3.7	OSD language	:	English,Spanish,French

4. Signal

4.1	<u>AV & Graphic input</u>		
4.1.1	Composite signal	:	CVBS
4.1.2	Y,C Signal	:	S-Video
4.1.3	Component signal	:	YPbPr x 2, HDMI,VGA compatible
4.1.4	Graphic I/P	:	Analog: D-sub 15pin detachable cable Digital:HDMI
4.1.5	EDID compatibility	:	DDC 1.3
4.1.6	I/P frequency	:	f _H : 31.5kHz to 60kHz/f _V : 56.25Hz to 75Hz(1024x768 recommended)

4.4 Remote Control

- 1 **POWER**(): Press this button to turn off to standby and turn on from standby.
- 2 **MUTE**(): Press this button to quiet the sound system. Press again to reactivate the sound system.
- 3 **P.STILL**: Press this button to hold on the screen. Press again to normal.
- 4 **P.SIZE**: When the input source is YPbPr 1, YPbPr 2, VGA or HDMI, press this button, the picture will change according to Fill All, Force 4:3, Letter Box, Wide or Anamorphic. When the input source is AV or S-Video, press this button, the picture will change according to Fill All, 4:3, Letter Box, Wide or Anamorphic.
- 5 **S.SELE**: Press this button to select the sound output from Main Window or Sub Window.
- 6 **P.MODE** : Press the button to select different picture effect.
- 7 **TIME**: Press this button to pop up the "Clock Set" menu.
- 8 **SLEEP**: Press this button to select the sleep time.
- 9 **INFO**: Press the button to display the source information.
- 10 **AUTO**: The Display automatically adjusts the phase, vertical / horizontal position when pressing this button in VGA mode.
- 11 **LAYOUT**: Press this button to pop up Layout menu.
- 12 **C/C**: Press this button to enter the Closed Caption Function. (Only for AV or S-Video)
- 13 **V-CHIP**: Press this button to enter the V-Chip Function. (Only for AV or S-Video)
- 14 **Number buttons**: Use these buttons to enter the password.

(Continued on next page)

- 15 **SWAP**: Press this button to switch the Main window or Sub window pictures in PIP and Split Screen.
- 16 **F.WHITE**: Press this button to show a full white picture.
- 17 **PIP POS.** : Press the button to select different Image Position in PIP Mode.
- 18 **PIP SIZE** : Press the button to select different Image Size in PIP Mode.
- 19 **SPEAKER**: Press this button to pop up the "Speaker" menu, use the ◀ / ▶ button to select "Internal" or "External".
- 20 **SOUND**: Press the button to select different sound effect.
- 21 **W.SELE**: Press this button to select the Main Window or Sub Window.
- 22 **SOURCE**: Press this button and use ▲ / ▼ button to select the signal sources. AV, S-Video, YPbPr 1, YPbPr 2, VGA or HDMI.
- 23 **PIP**: Press this button to change different Picture Mode.
- 24 **MENU**: Press this button to pop up the OSD Menu and press it again to exit the OSD Menu.
- 25 **OK** : Press to enter or confirm.
- 26 **◀ / ▶** : They are used as ◀ / ▶ buttons in the OSD Menu screen and they can be used for the adjustment of volume when the OSD Menu is not shown on the screen.
- ▲ / ▼ : They are used as ▲ / ▼ buttons in the OSD Menu screen.
- They also can be used for the selection of the program when the OSD Menu is not shown on the screen, but only for the Model with Tuner.

CUSTOM CODE: 20DD

FOR NTSC

Basic Operations & Circuit Description

MODULE

There are 1 pc. panel and 12 pc.s PCB including 2 pc.s Y/Z Sustainer board, 2 pc.s Y Drive board, 6 pc.s X Extension boards, 1 pc. Control (Signal Input) and 1 pc. Power board in the Module.

SET

There are 6 pc.s PCBs including 1 pc. AUX. PSU Board, 1 pc. Keypad board, 1 pc. Remote Control Receiver board, 1 pc. L/R Speakers and 1 pc. Main (Video) board in the SET.

PCB function

1. Power:

(1). Input voltage: AC 100V~120V, 45Hz~60Hz.

Input range: AC 90V(Min)~265V(Max) auto regulation.

(2). To provide power for PCBs.

2. Main (Video InterFace) board: To converter TV signals, S signals, AV signals, Y Pb/Cb Pr/Cr signals, DVI signals and D-SUB signals to digital ones and to transmit to Control board.

3. Control board: Dealing with the digital signal for output to panel.

4. Y-Sustainer / Z-Sustainer board:

(1). Receiving the signals from Control and high voltage supply.

(2). Output scanning waveform for Module.

5. Y-Drive board: Receive signal from Y sustainer, output horizontal scanning waveform to the panel.

6. X extension board (6pcs): Output addressing signals.

7. Tuner/Audio Board: Process and Amplifying the audio signal to speakers and convert TV RF signal to video/audio signal and send to Main board.

PCB failure analysis

- 1. CONTROL : a. Abnormal noise on screen. b. No picture.**
- 2. MAIN (video) : a. Lacking color, Bad color scale.
b. No voice.
c. No picture but with signals output, OSD and back light.
d. Abnormal noise on screen.**
- 3. POWER : No picture, no power output.**
- 4. Z - Sustainer : a. No picture.
b. Color not enough.
c. Flash on screen.**
- 5. Y - Sustainer : Darker picture with signals.**
- 6. X - Extension : Abormal vertical noise on screen.**
- 7. Audio Board or AUX PSU: a. No voice. (Make sure Mute/OFF) .
b. Noise.**

Basic operation of Plasma Display

- 1. After turning on power switch, power board sends 5Vst-by Volt to Micro Processor**
- 2. The micro Processor memorize the last state of Power, When the last state of power is on or receive power on signal from local Key or Remote control, Micro Processor will send on control signal to power. Then Power sends (5Vsc, 9Vsc, 24V and RLYON, Vs ON) to PCBs working. This time VIF will send signals to display Image, OSD on the panel and start to search available signal sources. If the audio signals input, them will be amplified by Audio AMP and transmitted to Speakers.**
- 3. If some abnormal signals are detected (for example: over volts, over current, over temperature and under volts), the system will be shut down by Power off.**

Main IC Specifications

- PW181 Image Processor, Scaler
- PW1231 Digital Video Signal Processor
- VPC 323XD Comb-filter Video Processor
- Z86229 NTSC Line 21 CCD decoder
- MSP34x0G Multistandard Sound Processor
- AD9880 Analog/HDMI Dual Display Interface
- PI5V330 Wideband/Video Quad 2-Channel MUX/DEMUX
- SM5304AV Video Buffer with Built-in Analog LPF
- TDA2616 2 X 12 W hi-fi audio power amplifier with mute
- SAA5360 Multi page intelligent teletext decoder
- AT24C32 Z-Wire Serial EEPROM
- HT48R06A-1 8-Bit Cost-Effective I/O Type MCU

PW181

Product Specification

General Description

The PW181 ImageProcessor is a highly integrated “system-on-a-chip” that interfaces computer graphics and video inputs in virtually any format to a fixed-frequency flat panel display.

Computer and video images from NTSC/PAL to WUXGA at virtually any refresh rate can be resized to fit on a fixed-frequency target display device with any resolution up to WUXGA. Video data from 4:3 aspect ratio NTSC or PAL and 16:9 aspect ratio HDTV or SDTV is supported. Multi-region, nonlinear scaling allows these inputs to be resized optimally for the native resolution of the display.

Advanced scaling techniques are supported, such as format conversion using multiple programmable regions. Three independent image scalers coupled with frame locking circuitry and dual programmable color lookup tables create sharp images in multiple windows, without user intervention.

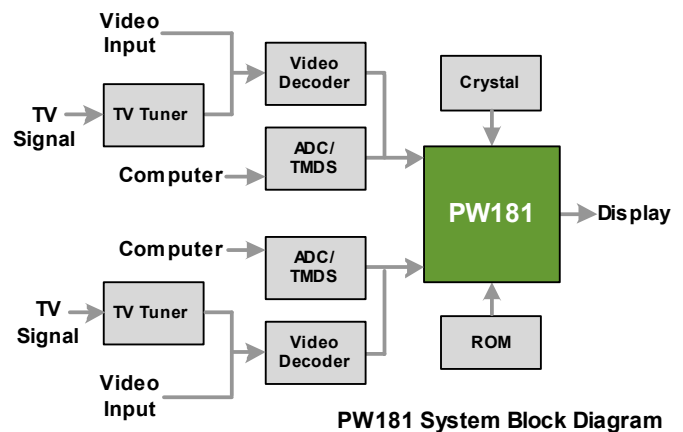

Embedded SDRAM frame buffers and memory controllers perform frame rate conversion and enhanced video processing completely on-chip. A separate memory is dedicated to storage of on-screen display images and CPU general purpose use.

Advanced video processing techniques are supported using the internal frame buffer, including motion adaptive, temporal deinterlacing with film mode detection. When used in combination with the new third-generation scaler, this advanced video processing technology delivers the highest quality video for advanced displays.

Both input ports support integrated DVI 1.0 content protection using standard DVI receivers.

A new advanced OSD Generator with more colors and larger sizes supports more demanding OSD applications, such as on-screen programming guides. When coupled with the new, faster, integrated microprocessor, this OSD Generator supports advanced OSD animation techniques.

Programmable features include the user interface, custom start-up screen, all automatic imaging features, and special screen effects.

Features

- Third-generation, two-dimensional filtering techniques
- Third-generation, advanced scaling techniques
- Second-generation Automatic Image Optimization
- Frame rate conversion
- Video processing
- On-Screen Display (OSD)
- On-chip microprocessor
- JTAG debugger and boundary scan
- Picture-in-picture (PIP)
- Multi-region, non-linear scaling
- Hardware 2-wire serial bus support

Applications

- Multimedia Displays
- Plasma Displays
- Digital Television

PRELIMINARY / CONFIDENTIAL

110 MSPS/140 MSPS Analog Interface for Flat Panel Displays

AD9883A

FEATURES

- 140 MSPS Maximum Conversion Rate
- 300 MHz Analog Bandwidth
- 0.5 V to 1.0 V Analog Input Range
- 500 ps p-p PLL Clock Jitter at 110 MSPS
- 3.3 V Power Supply
- Full Sync Processing
- Sync Detect for "Hot Plugging"
- Midscale Clamping
- Power-Down Mode
- Low Power: 500 mW Typical
- 4:2:2 Output Format Mode

APPLICATIONS

- RGB Graphics Processing
- LCD Monitors and Projectors
- Plasma Display Panels
- Scan Converters
- Microdisplays
- Digital TV

FUNCTIONAL BLOCK DIAGRAM

GENERAL DESCRIPTION

The AD9883A is a complete 8-bit, 140 MSPS monolithic analog interface optimized for capturing RGB graphics signals from personal computers and workstations. Its 140 MSPS encode rate capability and full power analog bandwidth of 300 MHz supports resolutions up to SXGA (1280 × 1024 at 75 Hz).

The AD9883A includes a 140 MHz triple ADC with internal 1.25 V reference, a PLL, and programmable gain, offset, and clamp control. The user provides only a 3.3 V power supply, analog input, and Hsync and COAST signals. Three-state CMOS outputs may be powered from 2.5 V to 3.3 V.

The AD9883A's on-chip PLL generates a pixel clock from the Hsync input. Pixel clock output frequencies range from 12 MHz to

140 MHz. PLL clock jitter is 500 ps p-p typical at 140 MSPS. When the COAST signal is presented, the PLL maintains its output frequency in the absence of Hsync. A sampling phase adjustment is provided. Data, Hsync, and clock output phase relationships are maintained. The AD9883A also offers full sync processing for composite sync and sync-on-green applications.

A clamp signal is generated internally or may be provided by the user through the CLAMP input pin. This interface is fully programmable via a 2-wire serial interface.

Fabricated in an advanced CMOS process, the AD9883A is provided in a space-saving 80-lead LQFP surface-mount plastic package and is specified over the 0°C to 70°C temperature range.

REV. A

PW1231A

Product Specification

General

The PW1231A is a high-quality, digital video signal processor that incorporates Pixelworks' patented deinterlacing, scaling, and video enhancement algorithms. The PW1231A accepts industry-standard video formats and resolutions, and converts the input into many desired output formats. The highly efficient video algorithms result in excellent quality video.

The PW1231A combines many functions into a single device, including a memory controller, auto-configuration, and others. This high level of integration enables simple, flexible, cost-effective solutions that require fewer components.

Features

- Built-In Memory Controller
- Motion-Adaptive Deinterlace Processor
- Intelligent Edge Deinterlacing
- Digital Color/Luminance Transient Improvement (DCTI/DLTI)
- Interlaced Video Input Options, including NTSC and PAL
- Independent horizontal and vertical scaling
- Copy Protection
- Two-Wire Serial Interface

Applications: For use with Digital Displays

- Flat-Panel (LCD, DLP) TVs
- Rear Projection TVs
- Plasma Displays
- LCD Multimedia Monitors
- Multimedia Projectors

Device	Application	Package
PW1231A PW1231AL	Up to XGA	160-pin PQF

PRELIMINARY—CONFIDENTIAL

Analog/HDMI Dual Display Interface

Preliminary Datasheet

3/26/2004

AD9880

FEATURES

- Analog/HDMI Dual Interface
- Supports High-Bandwidth Digital Content Protection
- RGB to YCbCr two-way color conversion
- Automated clamping level adjustment
- 1.8/3.3V Power Supply
- 100-pin LQFP Pb-Free Package
- RGB and YCbCr Output Formats

Analog Interface

- 8-bit Triple Analog to Digital Converters
- 150 MSPS Maximum Conversion Rate
- Macrovision Detection
- 2:1 Input Mux
- Full Sync Processing
- Sync Detect for "Hot Plugging"
- Mid-Scale Clamping

Digital Video Interface

- HDMI 1.0, DVI 1.0
- 150 MHz HDMI Receiver
- Supports High-Bandwidth Digital Content Protection (HDCP 1.1)

Digital Audio Interface

- HDMI 1.0 compatible audio interface
- S/PDIF (IEC90658 compatible) digital audio output
- Multi-channel I²S audio output (up to 8 channels)

APPLICATIONS

- Advanced TV
- HDTV
- Projectors
- LCD Monitor

GENERAL DESCRIPTION

The AD9880 offers designers the flexibility of an analog interface and High-Definition Multimedia Interface (HDMI) receiver integrated on a single chip. Also included is support for High bandwidth Digital Content Protection (HDCP).

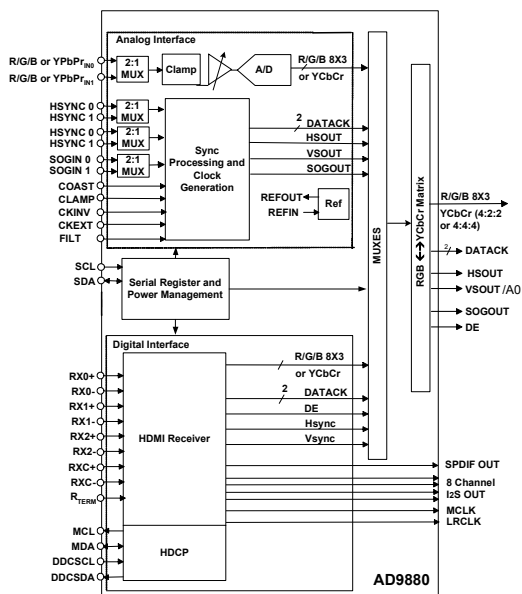

Analog Interface

The AD9880 is a complete 8-bit 150 MSPS monolithic analog interface optimized for capturing Component Video (YPbPr) and RGB graphics signals. Its 150 MSPS encode rate capability and full power analog bandwidth of 300 MHz supports all HDTV formats (up to 1080p) and FPD resolutions up to SXGA (1280 x 1024 at 75 Hz).

The analog interface includes a 150 MHz triple ADC with internal 1.25V reference, a Phase Locked Loop (PLL), and programmable gain, offset, and clamp control. The user provides only 1.8V and 3.3V power supply, analog input, and Hsync. Three-state CMOS outputs may be powered from 1.8V to 3.3V.

The AD9880's on-chip PLL generates a pixel clock from Hsync. Pixel clock output frequencies range from 12 MHz to 150 MHz.

FUNCTIONAL BLOCK DIAGRAM

PLL clock jitter is typically less than 500 ps p-p at 150 MHz. The AD9880 also offers full sync processing for composite sync and Sync-on-Green (SOG) applications.

Digital Interface

The AD9880 contains a HDMI 1.0 compatible receiver and supports all HDTV formats (up to 1080p) and display resolutions up to SXGA (1280 x 1024 at 75 Hz). The receiver features an intra-pair skew tolerance of up to one full clock cycle. With the inclusion of HDCP, displays may now receive encrypted video content. The AD9880 allows for authentication of a video receiver, decryption of encoded data at the receiver, and renewability of that authentication during transmission as specified by the HDCP 1.1 protocol.

Fabricated in an advanced CMOS process, the AD9880 is provided in a space-saving 100-lead LQFP surface-mount plastic package and is specified over the 0 °C to 70 °C temperature range.

AD9880 Preliminary Technical Information

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices.

Comb Filter Video Processor

1. Introduction

The VPC 323xD is a high-quality, single-chip video front-end, which is targeted for 4:3 and 16:9, 50/60-Hz and 100/120 Hz TV sets. It can be combined with other members of the DIGIT3000 IC family (such as DDP 331x) and/or it can be used with 3rd-party products.

The main features of the VPC 323xD are

- high-performance adaptive 4H comb filter Y/C separator with adjustable vertical peaking
- multi-standard color decoder PAL/NTSC/SECAM including all substandards
- four CVBS, one S-VHS input, one CVBS output
- two RGB/YC_rC_b component inputs, one Fast Blank (FB) input
- integrated high-quality A/D converters and associated clamp and AGC circuits
- multi-standard sync processing
- linear horizontal scaling (0.25 ... 4), as well as non-linear horizontal scaling 'Panoramavision'
- PAL+ preprocessing
- line-locked clock, data and sync, or 656-output interface
- peaking, contrast, brightness, color saturation and tint for RGB/YC_rC_b and CVBS/S-VHS
- high-quality soft mixer controlled by Fast Blank
- PIP processing for four picture sizes ($\frac{1}{4}$, $\frac{1}{9}$, $\frac{1}{16}$, or $\frac{1}{36}$ of normal size) with 8-bit resolution
- 15 predefined PIP display configurations and expert mode (fully programmable)
- control interface for external field memory
- I²C-bus interface
- one 20.25-MHz crystal, few external components
- 80-pin PQFP package

1.1. System Architecture

Fig.1–1 shows the block diagram of the video processor

Fig. 1–1: Block diagram of the VPC 323xD

Z86229

NTSC LINE 21 CCD DECODER

FEATURES

Devices	Speed (MHz)	Pin Count/ Package Types	Standard Temp. Range	On-Screen Display & Closed Captioning	Automatic Data Extraction	
					Program Rating	Time of Day
Z86229	12	18-Pin DIP, SOIC	0°C to +70°C	Yes	Yes	Yes

- Complete Stand-Alone Line 21 Decoder for Closed-Captioned and Extended Data Services (XDS)
- Preprogrammed to Provide Full Compliance with EIA-608 Specifications for Extended Data Services
- Automatic Extraction and Serial Output of Special XDS Packets (Time of Day, Local Time Zone, and Program Blocking)
- Programmable XDS Filter for a Specific XDS Packet
- Cost-Effective Solution for NTSC Violence Blocking inside Picture-in-Picture (PiP) Windows
- Minimal Communications and Control Overhead Provide Simple Implementation of Violence Blocking, Closed Captioning, and Auto Clock Set Features
- Programmable, On-Screen Display (OSD) for Creating Full Screen OSD or Captions inside a Picture-in-Picture (PiP) Window
- User-Programmable Horizontal Display Position for easy OSD Centering and Adjustment
- I²C Serial Data and Control Communication
- Supports 2 Selectable I²C Addresses

GENERAL DESCRIPTION

Capable of processing Vertical Blanking Interval (VBI) data from both fields of the video frame in data, the Z86229 Line 21 Decoder offers a feature-rich solution for any television or set-top application. The robust nature of the Z86229 helps the device conform to the transmission format defined in the Television Decoder Circuits Act of 1990, and in accordance with the Electronics Industry Association specification 608 (EIA-608).

The Line 21 data stream can consist of data from several data channels multiplexed together. Field 1 consists of four data channels: two Captions and two Texts. Field 2 consists of five additional data channels: two Captions, two Texts, and Extended Data Services (XDS). The XDS data structure is

defined in EIA-608. The Z86229 can recover and display data transmitted on any of these nine data channels.

The Z86229 can recover and output to a host processor via the I²C serial bus. The recovered XDS data packet is further defined in the EIA-608 specification. The on-chip XDS filters in the Z86229 are fully programmable, enabling recovery of only those XDS data packets selected by the user. This functionality allows the device to extract the required XDS information with proper XDS filter setup for compatibility in a variety of TVs, VCRs, and Set-Top boxes.

In addition, the Z86229 is ideally suited to monitor Line 21 video displayed in a PiP window for violence blocking, CCD, and other XDS data services. A block diagram of the Z86229 is illustrated in Figure 1.

Multistandard Sound Processor Family

Release Note: Revision bars indicate significant changes to the previous edition. The hardware and software description in this document is valid for the MSP 34x0G version B8 and following versions.

1. Introduction

The MSP 34x0G family of single-chip Multistandard Sound Processors covers the sound processing of all analog TV-Standards worldwide, as well as the NICAM digital sound standards. The full TV sound processing, starting with analog sound IF signal-in, down to processed analog AF-out, is performed on a single chip. Figure 1–1 shows a simplified functional block diagram of the MSP 34x0G.

This new generation of TV sound processing ICs now includes versions for processing the multichannel television sound (MTS) signal conforming to the standard recommended by the Broadcast Television Systems Committee (BTSC). The DBX noise reduction, or alternatively, Micronas Noise Reduction (MNR) is performed alignment free.

Other processed standards are the Japanese FM-FM multiplex standard (EIA-J) and the FM Stereo Radio standard.

Current ICs have to perform adjustment procedures in order to achieve good stereo separation for BTSC and EIA-J. The MSP 34x0G has optimum stereo performance without any adjustments.

All MSP 34xxG versions are pin compatible to the MSP 34xxD. Only minor modifications are necessary to adapt a MSP 34xxD controlling software to the MSP 34xxG. The MSP 34x0G further simplifies controlling software. Standard selection requires a single I²C transmission only.

The MSP 34x0G has built-in automatic functions: The IC is able to detect the actual sound standard automatically (Automatic Standard Detection). Furthermore, pilot levels and identification signals can be evaluated internally with subsequent switching between mono/stereo/bilingual; no I²C interaction is necessary (Automatic Sound Selection).

The MSP 34x0G can handle very high FM deviations even in conjunction with NICAM processing. This is especially important for the introduction of NICAM in China.

The ICs are produced in submicron CMOS technology. The MSP 34x0G is available in the following packages: PLCC68 (not intended for new design), PSDIP64, PSDIP52, PQFP80, and PLQFP64.

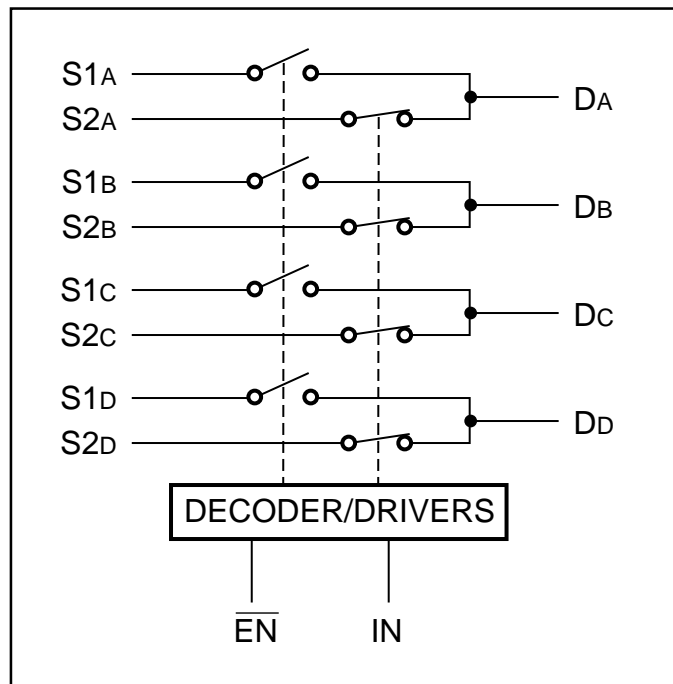

Fig. 1–1: Simplified functional block diagram of the MSP 34x0G

Low ON Resistance Wideband/Video Quad 2-Channel MUX/DEMUX

Product Features:

- High-performance, low-cost solution to switch between video sources
- Wide bandwidth: 200 MHz
- Low ON-resistance: 3Ω
- Low crosstalk at 10 MHz: -58 dB
- Ultra-low quiescent power ($0.1 \mu\text{A}$ typical)
- Single supply operation: $+5.0\text{V}$
- Fast switching: 10 ns
- High-current output: 100 mA
- Packages available:
 - 16-pin 300-mil wide plastic SOIC (S)
 - 16-pin 150-mil wide plastic SOIC (W)
 - 16-pin 150-mil wide plastic QSOP (Q)

1	X	Disabled

Product Description:

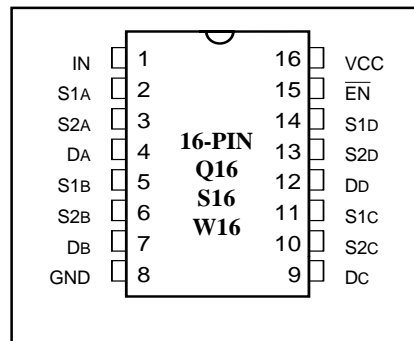

Pericom Semiconductor's PI5V series of mixed signal video circuits are produced in the Company's advanced CMOS low-power technology, achieving industry leading performance.

The PI5V330 is a true bidirectional Quad 2-channel multiplexer/demultiplexer that is recommended for both RGB and composite video switching applications. The VideoSwitch™ can be driven from a current output RAMDAC or voltage output composite video source.

Low ON-resistance and wide bandwidth make it ideal for video and other applications. Also this device has exceptionally high current capability which is far greater than most analog switches offered today. A single 5V supply is all that is required for operation.

The PI5V330 offers a high-performance, low-cost solution to switch between video sources. The application section describes the PI5V330 replacing the HC4053 multiplier and buffer/amplifier.

16-Pin Product Configuration

Product Pin Description

Pin Name	Description

DA, DB, DC, DD	Analog Video I/O
GND	Ground
VCC	Power

The SM5304AV is a 75 Ω terminating resistance drive video buffer with built-in analog filter. The filter cutoff frequency, controlled by the resistance connected to RFC pin, can be set to match any system resolution. The output buffer can be selected 0dB, 6dB, and 12dB. The feedback point occurs after the external coupling capacitors, and the coupling capacitances can be reduced.

- 5V \pm 10% supply voltage
- Adjustable cutoff frequency using external resistor
- 0dB, 6dB, 12dB selectable gain using logic signal
- \pm 0.5dB output gain error
- Two systems (two load resistances) can be driven
- 0.7% output signal harmonic distortion
- Sag compensation circuit built-in
- Package: 8-pin VSOP (Pb free)

- DVD
- Digital still camera
- Digital VHS

2 x 12 W hi-fi audio power amplifiers with mute

TDA2616/TDA2616Q

FEATURES

- Requires very few external components
- No switch-on/switch-off clicks
- Input mute during switch-on and switch-off
- Low offset voltage between output and ground
- Excellent gain balance of both amplifiers
- Hi-fi in accordance with IEC 268 and DIN 45500
- Short-circuit proof and thermal protected
- Mute possibility.

GENERAL DESCRIPTION

The TDA2616 and TDA2616Q are dual power amplifiers. The TDA2616 is supplied in a 9-lead single-in-line (SIL9) plastic power package (SOT131), while the TDA2616Q is supplied in a 9-lead SIL-bent-to-DIL plastic power package (SOT157). They have been especially designed for mains fed applications, such as stereo radio and stereo TV.

Multi page intelligent teletext decoder

SAA5360; SAA5361

1 FEATURES

- Support for 50 or 60 and 100 or 120 Hz and progressive scan display modes
- Complete 625 line teletext decoder in one chip reduces printed-circuit board area and cost
- Automatic detection of transmitted fasttext links or service information (packet 8/30)
- On-Screen Display (OSD) for user interface menus using teletext and dedicated menu icons
- Video Programming System (VPS) decoding
- Wide Screen Signalling (WSS) decoding
- Pan-European, Cyrillic, Greek, Turkish, Arabic and Iranian character sets in each chip
- High-level command interface via I²C-bus gives easy control with a low software overhead
- High-level command interface is backward compatible to Stand-Alone Fasttext And Remote Interface (SAFARI)
- 625 and 525 line display
- RGB interface to standard colour decoder ICs; current source
- Versatile 8-bit open-drain Input/Output (I/O) expander; 5 V tolerant
- Single 12 MHz crystal oscillator
- Single power supply: from 3.0 V to 3.6 V
- Operating temperature: -20 to +70 °C
- Automatic detection of transmitted pages to be selected by page up and page down

- 8 page fasttext decoder
- Table Of Pages (TOP) decoder with Basic Top Table (BTT) and Additional Information Tables (AITs)
- 4 page user-defined list mode.

2 GENERAL DESCRIPTION

The SAA5360; SAA5361 is a single-chip multi page 625 line world system teletext decoder with a high-level command interface, and is SAFARI compatible.

The device is designed to minimize the overall system cost, due to the high-level command interface offering the benefit of a low software overhead in the TV microcontroller.

The SAA5360 incorporates the following functions:

- 10 page teletext decoder with OSD, fasttext, TOP, default and list acquisition modes
- Automatic channel installation support.

The functionality of the SAA5361 is similar to the SAA5360, but offers the capability to store up to 250 additional pages of teletext in an external SRAM.

Features

- **Low-Voltage and Standard-Voltage Operation**
 - 5.0 ($V_{CC} = 4.5V$ to $5.5V$)
 - 2.7 ($V_{CC} = 2.7V$ to $5.5V$)
 - 2.5 ($V_{CC} = 2.5V$ to $5.5V$)
 - 1.8 ($V_{CC} = 1.8V$ to $5.5V$)
- **Low-Power Devices ($I_{SB} = 2 \mu A$ @ $5.5V$) Available**
- **Internally Organized 4096 x 8, 8192 x 8**
- **2-Wire Serial Interface**
- **Schmitt Trigger, Filtered Inputs for Noise Suppression**
- **Bidirectional Data Transfer Protocol**
- **100 kHz (1.8V, 2.5V, 2.7V) and 400 kHz (5V) Clock Rate**
- **Write Protect Pin for Hardware Data Protection**
- **32-Byte Page Write Mode (Partial Page Writes Allowed)**
- **Self-Timed Write Cycle (10 ms max)**
- **High Reliability**
 - **Endurance: 1 Million Write Cycles**
 - **Data Retention: 100 Years**
 - **ESD Protection: >3,000V**
- **Automotive Grade and Extended Temperature Devices Available**
- **8-Pin JEDEC PDIP, 8-Pin JEDEC SOIC, 8-Pin EIAJ SOIC, and 8-pin TSSOP Packages**

Description

The AT24C32/64 provides 32,768/65,536 bits of serial electrically erasable and programmable read only memory (EEPROM) organized as 4096/8192 words of 8 bits each. The device's cascadable feature allows up to 8 devices to share a common 2-wire bus. The device is optimized for use in many industrial and commercial applications where low power and low voltage operation are essential. The AT24C32/64 is available in space saving 8-pin JEDEC PDIP, 8-pin JEDEC SOIC, 8-pin EIAJ SOIC, and 8-pin TSSOP (AT24C64) packages and is accessed via a 2-wire serial interface. In addition, the entire family is available in 5.0V (4.5V to 5.5V), 2.7V (2.7V to 5.5V), 2.5V (2.5V to 5.5V) and 1.8V (1.8V to 5.5V) versions.

***NOTICE:** Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Block Diagram

Pin Description

SERIAL CLOCK (SCL): The SCL input is used to positive edge clock data into each EEPROM device and negative edge clock data out of each device.

SERIAL DATA (SDA): The SDA pin is bidirectional for serial data transfer. This pin is open-drain driven and may be wire-ORed with any number of other open-drain or open collector devices.

DEVICE/PAGE ADDRESSES (A2, A1, A0): The A2, A1 and A0 pins are device address inputs that are hard wired or left not connected for hardware compatibility with AT24C16. When the pins are hardwired, as many as eight 32K/64K devices may be addressed on a single bus system (device addressing is discussed in detail under the

Device Addressing section). When the pins are not hardwired, the default A₂, A₁, and A₀ are zero.

WRITE PROTECT (WP): The write protect input, when tied to GND, allows normal write operations. When WP is tied high to V_{CC}, all write operations to the upper quadrant (8/16K bits) of memory are inhibited. If left unconnected, WP is internally pulled down to GND.

Memory Organization

AT24C32/64, 32K/64K SERIAL EEPROM: The 32K/64K is internally organized as 256 pages of 32 bytes each. Random word addressing requires a 12/13 bit data word address.

Features

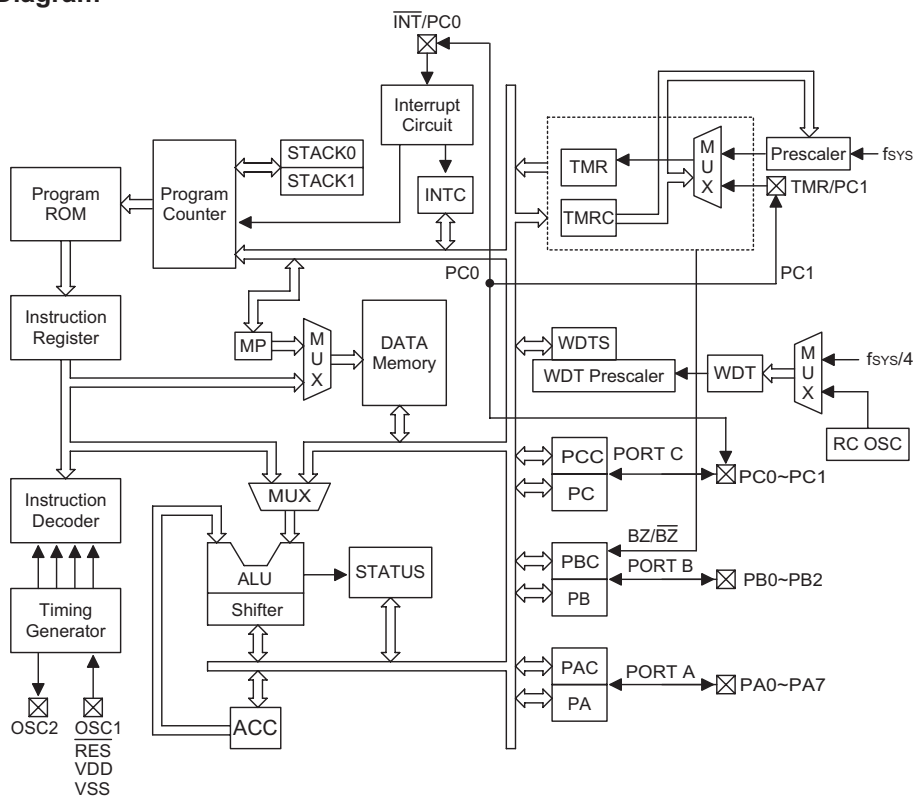

- Operating voltage:
f_{sys}=4MHz: 2.2V~5.5V
f_{sys}=8MHz: 3.3V~5.5V
- 13 bidirectional I/O lines
- An interrupt input shared with an I/O line
- 8-bit programmable timer/event counter with overflow interrupt and 8-stage prescaler
- On-chip crystal and RC oscillator
- Watchdog Timer
- 1024×14 program memory ROM
- 64×8 data memory RAM
- Buzzer driving pair and PFD supported
- HALT function and wake-up feature reduce power consumption
- Up to 0.5μs instruction cycle with 8MHz system clock at V_{DD}=5V
- All instructions in one or two machine cycles
- 14-bit table read instruction
- Two-level subroutine nesting
- Bit manipulation instruction
- 63 powerful instructions
- Low voltage reset function
- 16-pin SSOP package
18-pin DIP/SOP package

General Description

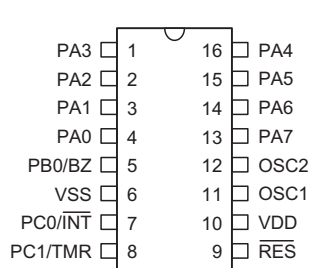

The HT48R06A-1/HT48C06 are 8-bit high performance, RISC architecture microcontroller devices specifically designed for cost-effective multiple I/O control product applications. The mask version HT48C06 is fully pin and functionally compatible with the OTP version HT48R06A-1 device.

The advantages of low power consumption, I/O flexibility, timer functions, oscillator options, HALT and wake-up functions, watchdog timer, buzzer driver, as well as low cost, enhance the versatility of these devices to suit a wide range of application possibilities such as industrial control, consumer products, subsystem controllers, etc.

Pad Description

Pad Name	I/O	Options	Description
PA0~PA7	I/O	Pull-high* Wake-up	Bidirectional 8-bit input/output port. Each bit can be configured as wake-up input by options. Software instructions determine the CMOS output or Schmitt trigger input with a pull-high resistor (determined by pull-high options).
PB0/BZ PB1/BZ PB2	I/O	Pull-high* I/O or BZ/BZ	Bidirectional 3-bit input/output port. Software instructions determine the CMOS output or Schmitt trigger input with a pull-high resistor (determined by pull-high options). The PB0 and PB1 are pin-shared with the BZ and \overline{BZ} , respectively. Once the PB0 and PB1 are selected as buzzer driving outputs, the output signals come from an internal PFD generator (shared with a timer/event counter).
VSS	—	—	Negative power supply, ground
PC0/ \overline{INT} PC1/TMR	I/O	Pull-high*	Bidirectional I/O lines. Software instructions determine the CMOS output or Schmitt trigger input with a pull-high resistor (determined by pull-high options). The external interrupt and timer input are pin-shared with the PC0 and PC1, respectively. The external interrupt input is activated on a high to low transition.
\overline{RES}	I	—	Schmitt trigger reset input. Active low
VDD	—	—	Positive power supply
OSC1 OSC2	I O	Crystal or RC	OSC1, OSC2 are connected to an RC network or Crystal (determined by options) for the internal system clock. In the case of RC operation, OSC2 is the output terminal for 1/4 system clock.

* All pull-high resistors are controlled by an option bit.

Absolute Maximum Ratings

Supply Voltage	$V_{SS}-0.3V$ to $V_{SS}+6.0V$	Storage Temperature	$-50^{\circ}C$ to $125^{\circ}C$
Input Voltage.....	$V_{SS}-0.3V$ to $V_{DD}+0.3V$	Operating Temperature.....	$-40^{\circ}C$ to $85^{\circ}C$

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

D.C. Characteristics

Ta=25°C

Symbol	Parameter	Test Conditions		Min.	Typ.	Max.	Unit
		V _{DD}	Conditions				
V _{DD}	Operating Voltage	—	f _{SYS} =4MHz	2.2	—	5.5	V
		—	f _{SYS} =8MHz	3.3	—	5.5	V

1. GENERAL DESCRIPTION

❑ DESCRIPTION

The PDP42X2#### 42-inch 16:9 color plasma display module with resolution of 1024(H) × 768(V) pixels.
This is the display device which offers vivid colors with adopting AC plasma technology by LG Electronics Inc.

❑ FEATURES

High peak brightness (1000cd/m² Typical) and high contrast ratio (5000:1 Typical) enables user to create high performance PDP SETs.

❑ APPLICATIONS

- ✓ General television systems
- ✓ Public information display
- ✓ Video conference systems
- ✓ Education and training systems

□ ELECTRICAL INTERFACE OF PLASMA DISPLAY

The PDP42X2#### requires 8bits or 10bits of digital video signals for each RGB color.

In addition to the video signals, six different DC voltages are required to operate the display.

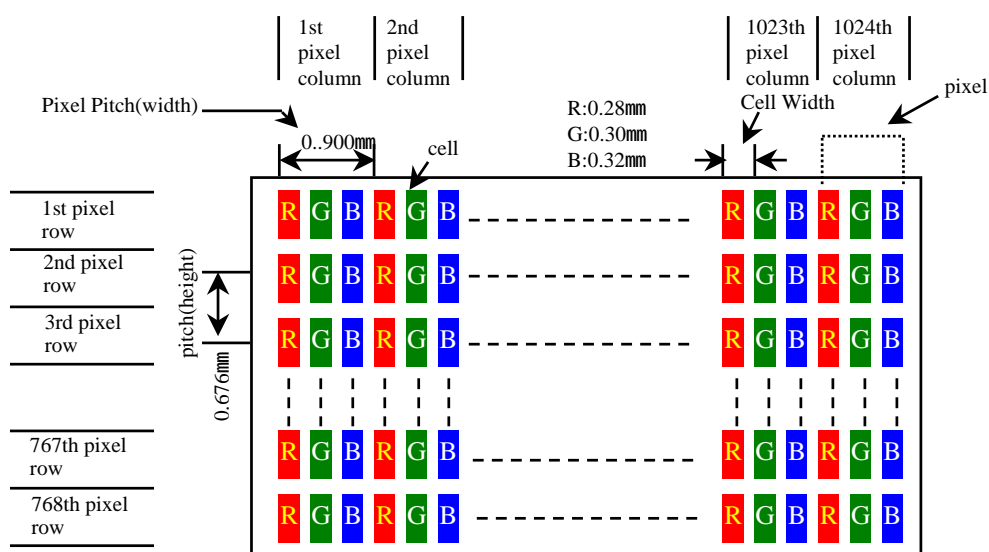

The PDP42X2#### is equipped with P-CUBE function which analyzes display signals to optimize system control factor for showing the best display performance.

□ GENERAL SPECIFICATIONS

- ✓ Model Name : PDP42X2#### (42X2#### Model)
- ✓ Number of Pixels : 1024(H) × 768(V) (1pixel=3 RGB cells)
- ✓ Pixel Pitch : 900 μ m (H) × 676 μ m (V)
- ✓ Cell Pitch : 300 μ m (H) × 676 μ m (V) (Green Cell basis)
- ✓ Display Area : 920.1(H) × 518.4(V) ±0.5mm
- ✓ Outline Dimension : 1005(H) × 597(V) × 61.2(D)±1mm
- ✓ Pixel Type : RGB Closed type
- ✓ Number of Gradations : (R)1024 × (G)1024 × (B)1024
- ✓ Weight : 16.1 Kg ± 0.5 Kg (Net 1EA)
109 Kg ± 5 Kg (5EA/1BOX)
- ✓ Aspect Ratio : 16:9
- ✓ Peak Brightness : Typical 1000cd/m² (1/100 White Window)
- ✓ Contrast Ratio : Average 60:1 (In a bright room with 150Lux at center)
Typical 5000:1 (In a dark room 1/100 White Window pattern at center)
- ✓ Power Consumption : Typical 300 W (Full White), Max.330W
- ✓ Expected Life-time : more than 60,000 Hours of continuous operation

Life-time is defined as the time when the brightness level becomes half of its initial value.

✓ Display Dot Diagram

Formation and Specification of Module

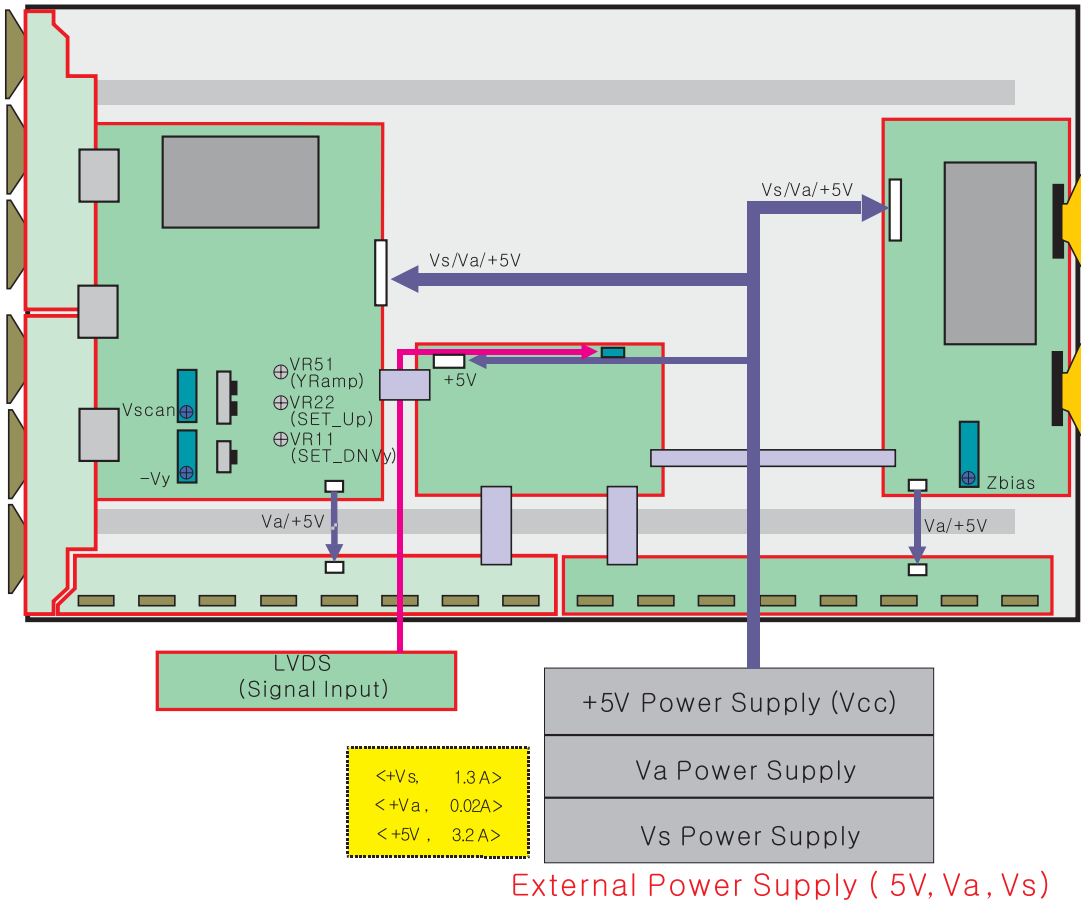

External Cable Connection

NO	Connector	Input Voltage & Signal
1	P151[Z SUS B/D]	5V, Va, Vs
2	P151[Y SUS B/D]	5V, Va, Vs
3	P300[CTRL B/D]	5V
4	P201[CTRL B/D]	Video Signal

NO	Part No.		Description
①	6871QCH038A	PWB(PCB) ASSY	LVDS CTRL B/D ASSY
②	6871QDH068A	PWB(PCB) ASSY	Y DRV UPPER B/D ASSY

④	6871QYH030A	PWB(PCB) ASSY	Y SUS B/D ASSY
⑤	6871QZH034A	PWB(PCB) ASSY	Z SUS B/D ASSY
⑥	6871QLH037A	PWB(PCB) ASSY	X LEFT B/D ASSY
⑦	6871QRH043A	PWB(PCB) ASSY	X RIGHT B/D ASSY

Block Diagram

Input Signal: Full White
Current(typ.): rms

Trouble Shooting

1. Checking for no Picture

A screen doesn't display at all and condition of black pattern or power off.

- (1) Check whether the CTRL B/D LED(D1, D14) is turned on or not.
- (2) Check the power and signal cable of CTRL B/D.
- (3) X B/D, Y B/D, Z B/D is well plugged in.
- (4) Check the connection of X B/D, Y B/D and Z B/D to CTRL B/D.
- (5) Measure the output wave of X, Y, Z B/D with oscilloscope(more than 200MHz)
and find the trouble of B/D by comparing the output wave with below figure.
 - Measure Point fo Y B/D : TP(Bead B1)
 - Measure Point fo Z B/D : TP(Bead B1)
- (6) Check the SCAN(Y side) IC
- (7) Check the DATA(X side) TCP IC
- (8) Replace the CTRL B/D.

<A: Y B/D Output wave - 1 FRAME>

<B: Y B/D Output wave - 1 SF>

<A: Y B/D Output wave - 1 FRAME>

<B: Y B/D Output wave - 2, 3, 4 SF>

<A: Y B/D Output wave - 1Frame>

<B: Y B/D Output wave - 5~10 SF>

<A: Z B/D Output wave - 1Frame>

<B: Z B/D Output wave - 1~10 SF>

<X B/D Output wave - 1 FRAME>

<X B/D Output wave - 1 SF>

<X B/D Output wave - Enlargement>

2. Hitch Diagnosis Following Display Condition

2-1. 1/2 of the screen is not turned on

- (1) Confirm the power connection of X B/D is well plugged in which is correspond to not showing screen.
- (2) Confirm the power connector that is connected between CTRL B/D and X B/D correspond to not showing part.
- (3) Replace relevant X B/D. When replace X B/D, TCP should have been connected accurately, it confirms certainly.

※ Relationship between screen and X B/D

Screen			X B/D
Left of the Screen	1/2	<-->	Right X B/D
Right of the Screen	1/2	<-->	Left X B/D

※ Screen Display Form

※ 1/4 of the screen doesn't be shown
Equality with 2-1

2-2. The screen doesn't be shown as Data TCP

(Include not be shown part of Data COF quantity or a part)

- (1) Replace the cable between the CTRL B/D and X B/D, when there is not change, replace the CTRL B/D.
- (2) Check the Data TCP of point screen does not come out is fail and when it is not problem, connect again with correspondence TCP.
- (3) In case of fail the correspondence Data TCP, replace the Module.

※ Example of the screen display form

(Anything of the 16 Data TCP can be shown beside below pictures)

2-3. It Generates Unusual Pattern of Data TCP IC unit

- (1) In case of line shape or dotted line occurs, check the screw on X B/D and make sure it is tight. When the there is not change, replace the X B/D.
- (2) In case of <case 1>
 - confirm the connection of Data TCP connector
 - Replace relevant XB/D or CTRL B/D
- (3) In case of <case 2, 3>
 - confirm the connector that is connected from CTRL B/D to relevant X B/D
 - Replace relevant XB/D or CTRL B/D

* Screen Display Form

2-4. The screen display has a problem for Scan FPC.

- (1) It may be a problem between Scan FPC and Y DRV B/D.
- (2) Check the connection of Y DRV B/D and Scan FPC.
- (3) If the Scan IC is failed, replace the Y DRV B/D.
(Check the compatibility)

* Screen Display Form

* Check a method of SCAN IC

Change the Vpp Pin into ANODE and GND Pin into CATHOD and then test the Diode with forward or reverse direction.

2-5. The screen has a vertical line with regular gap. (A vertical stripe flash at especial color)

- (1) This problem comes from Control B/D.
- (2) Replace Control B/D.

* Screen Display Form

The screen has a vertical line with regular gap

2-6. A data copy is happened into vertical direction

- (1) In this case, it's due to incorrect marking of scan wave.
- (2) Replace a Y DRV B/D or Y SUS B/D.

* Screen Display Form

<Display Pattern>

<Case 1 : Entire Copy>

<Case 2 : Top Copy>

<Case 3 : Bottom Copy>

<Case 4 : Entire Copy>

2-7. The screen has one or several vertical line

- (1) In this case, It isn't a problem about controller B/D or X B/D.
- (2) It may cause followings.
 - It's out of order a panel
 - Open or short of DATA TCP FPC attached panel
 - DATA TCP attached on panel is out of order

- (3) Replace Module.

* Screen Display Form

It may show several vertical lines in a quarter or other division part of screen including left case.

2- 8. The screen has one or several horizontal line

- (1) In this case, it isn't a problem about controller B/D or X B/D.
- (2) It may cause followings.
 - It's out of order a panel
 - Open or short of SCAN FPC attached panel
 - SCAN FPC attached on panel is out of order.

- (3) Replace Module.

* Screen Display Form

It may be shown on several horizontal lines including left case.

2-9. The screen displays input signal pattern but the brightness is dark

- (1) In this case, Z B/D operation isn't complete.
- (2) Check the power cord of Z B/D.
- (3) Check the connector of Z B/D and Controller B/D.
- (4) Replace the Controller B/D or Z B/D.

2-10. The screen displays other color partially on full white screen or happens discharge partially on full black screen.

- (1) Check the slope of Y B/D ramp, set up, set down waveform.
 - (2) Measure each output waveform with oscilloscope (more than 200MHz) and compare the data with (figure 2) data.
Adjust the Y B/D ramp/set up/set down slope and Y B/D -Vy/Vscan, Z B/D Vz voltage by changing VR51/VR22 /VR11/PS101, PS102/PS101 to be on the label data.
- Measuring Point of Y B/D : B1
 - Measuring Point of Z B/D : B1

2-11. It doesn't display a specified brightness at specified color

- (1) Check the connector of CTRL B/D input signal.
- (2) Replace the CTRL B/D.

3. Checking for component damage

3-1. Y IPM(IC81) or Z IPM(IC81) damage

- (1) When the internal Sustain_FET of Y IPM or Z IPM is damaged, screen doesn't be shown or electric discharge is generated.
 - Test Point: GND~B1(Y B/D), GND~B1(Z B/D)
 - Waveform state: B1(Y B/D) or B1(Z B/D) has no wave output
- (2) When the internal ER_FET of Y IPM or Z IPM is damaged, Y IPM or Z IPM temperature is increased.
 - Test Point: GND~B1(Y B/D), GND~B1(Z B/D)
 - Waveform state: As shown (Fig. 1)

(Fig. 1) When the ER_FET is damaged

<IPM Normal Output Wave >

- Measurement position: Enlarge sustain section after measuring B1 waveform of Y B/D and B1 waveform of Z B/D. (Full White Pattern)

3-2. FET Ass'y(Y B/D: HS11, 51, 91) damage

- (1) When Set_Up FET is damaged, screen doesn't be shown
- Test Point: Enlarge the after measuring GND~B1(Y B/D)
 - Waveform state: As shown (Fig. 2)

(Fig. 2) When the Set_Up FET is damaged

- (2) When Set_Down FET/Pass_Top FET is damaged, mis discharge of entire screen is generated.
- Test Point: Enlarge the after measuring GND~B1(Y B/D)
 - Waveform state: As shown (Fig. 3)

(Fig. 3) When the Set_Down FET is damaged

- (3) When Ramp FET is damaged
- Test Point: Enlarge the after measuring GND~B1(Y B/D)
 - Waveform state: As shown (Fig. 4)

(Fig. 4) When the Ramp FET is damaged

<FET Ass'y Normal Output Waveform >

- Measurement position: Reset section enlargement wave of TP B1(Y B/D) (Full White Pattern)

3-3. SCAN IC(Y drv B/D: IC1~12) damage

- (1) In case of SCAN IC bad, one horizontal line may open at screen.

- Test Point: ICT measurment of GND~Y drive B/D output
- Waveform state: As shown (Fig. 5)

(Fig. 5) When SCAN IC is bad

- (2) Screen may not be shown when SCAN IC is damaged by bad SCAN IC or external electricity or spark.

- Test Point: ICT measurment of GND~Y drive B/D output
- Waveform state: Output wave format is not shown (You can see the damage of Y drive B/D Top or Bottom's SCAN IC)

- (3) Screen shaken horizontally when Y drv B/D Top and Bottom cable is bad

- Test Point: ICT measurment of GND~Y drive B/D output
- Waveform state: As shown (Fig. 6)

(Fig. 6) When Y drv B/D Top and Bottom cable is bad

- (4) In case of shorting the SCAN IC output by a dust, foreign substance, it may overlap two horizontal lines on screen.

- Test Point: ICT measurment of GND~Y drive B/D output
- Waveform state: As shown (Fig. 7)

(Fig. 7) When SCAN IC output is short

<SCAN IC Normal Output Wave >

- Measurement position: SCAN section enlarge the after measuring output ICT of Y drive B/D. (Full White Pattern)

Vsc = 120V @ 42X2##2# Moduel

3-4. TCP damage

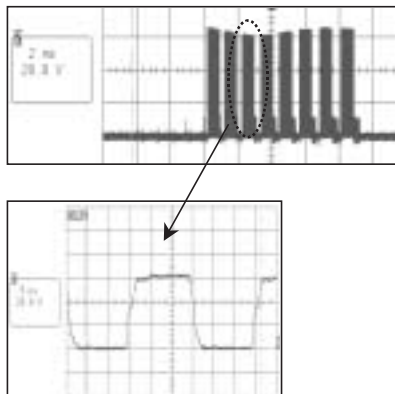

- (1) In case of shorting or opening of IC output of TCP several vertical lines occurred.
 - Test Point: Enlarge the after measuring output TP of GND~TCP.
 - Waveform state: As shown Output of (Fig. 8)
- In case of normal wave output, when STB signal is applied, STB signal remains High. And when STB signal is applied again, it must be fall Low. But when TCP IC is bad, even STB signal is not generated, Output falls to Low.

(Fig. 8) When IC output of TCP is poor

- ※ Since the output TP of TCP is covered with SR, when measurement is needed, remove the SR, measures. And after measuring insulates TCP leads with insulation tape.

- (2) In case of being damaged on TCP IC, the screen doesn't be shown or happens discharge partially. When IC fail occurs, it will be able to discover the trace which is burned.
 - Test Point: Enlarge the after measuring output TP of GND~TCP
 - Waveform state: Output wave doesn't come out

<TCP Normal Output Wave >

- Measurement position: Enlarge the after measuring output TP of TCP (Full White Pattern)

3-5. Crystal(CTRL B/D: X2) damage

- (1) When Crystal is damaged, the screen doesn't be turned on.
 - Test Point: Measuring 3pin of GND~Crystal(Ctrl B/D: X2)
 - Waveform state: Output wave doesn't come out
- (2) In case of unusual launch of the Crystal, it may blink the screen.
 - Waveform state: As shown (Fig. 9)

(Fig. 9) When Crystal is bad

<Crystal Normal Output Waveform >

- Measurement position: Measuring output 3pin of Crystal(X2: 100MHz) on Ctrl B/D (Full White Pattern)

4. Shift breakdown component compatibility consideration

4-1. Scan IC follows in application, compatibility of Y DRV Top, Bottom B/D

- (1) When B/D applicated SN755866 is breakdown, you must mutually only replace Top B/D and Bottom B/D applicated SN755866.
- (2) When IC of B/D applicated SN755866 IC is breakdown, you must only replace SN755866 IC.
Different IC application being not right

- * When replacing the IC, notice
To prevent dust, fix the same IC after removing the silicon
and then it again stick the IC.

Silicon Part No.: 7254Q00002A(Tube Type)
7254Q00002B(Can Type)

If you forget your V-Chip Password

- Omnipotence V-Chip Password: **5898**.
- Press **MENU** button.
- Press **Up, Down** and CH+, CH- buttons to highlight "V-Chip" Control.
- Press OK button to pop up "INPUT PASSWORD".
- Use the Number buttons (0~9) to enter the omnipotence Password 1234.
- Press Down to highlight "Password change" Control.
- Press **OK** button to confirm and will pop up "Password Change" item.
- Change to your familiar Password again.

Software upgrade

- Connect the RS-232C input jack to an external control device (such as a computer) and software upgrade.

Type of connector; D-Sub 9-pin male

No.	Pin name
1	No connection
2	RXD (Receive data)
3	TXD (Transmit data)
4	DTR (DTE side ready)
5	GND
6	DSR (DCE side ready)
7	RTS (Ready to send)
8	CTS (Clear to send)
9	No Connection

RS-232C configurations

Software upgrade Process

- Power Switch OFF.
- Connect the serial port of the control device to the RS-232 jack on the PDP back panel.
RS-232C connection cables are not supplied with the PDP.
- Power Switch ON. The power indicator on the front of the panel should now display red, means that the PDP is in standby mode.
- Copy the software (Flash Upgrader) to the computer.
- Open the software (Flash Upgrader.exe)
- Point "Flash" on the interface of the Flash Upgrader.exe.
- Press STANDBY button on the front panel or POWER button of Remote control, Power indicator green, the PDP is in power ON mode, software start upgrader immediately.
- Waiting for the upgrader programing, when it is finished, the PDP will auto power on.
- After the upgrader is finished, shut down the power switch, take out the RS-232C connection after the power indicator is extinguished.

Note: The computer and PDP must be keep **Power ON** in the software upgrade processing.
